GRIPS® ANTIVIRALFOIL
LOGIS

**Protect your employees and customers permanently
against viruses and bacteria!**

Employees and customers come into contact with different surfaces. Viruses can adhere to these surfaces for several days and spread infections by touch. Reduce this risk of infection permanently with LOGIS GRIPS® Antiviralfoil.

LOGIS GRIPS® Antiviralfoil is a transparent, self-adhesive anti-germ film for long-term protection of surfaces against enveloped viruses and bacteria. The application of the film seals the surface and makes >99% of all enveloped viruses such as Covid-19 and influenza, as well as bacteria (including multi-resistant germs), harmless. Once applied, the film protects the surface for up to one year, depending on the stress. It can be easily applied to both smooth and three-dimensional surfaces. Regular cleaning of the surface has a positive effect on effectiveness and durability. The effectiveness has been tested and confirmed by the Eurovir® hygiene laboratory. The skin compatibility was confirmed in dermatological tests by Dermatest® with "VERY GOOD".

The LOGIS GRIPS® Antiviralfoil is "Made in Germany" and is produced under the highest quality standards. It is registered by law as an occupational safety product with the Federal Institute for Occupational Safety and Health. Stickers are available to communicate the use of the LOGIS GRIPS® Antiviralfoil, which visibly show your employees and customers that the film protects the surface.

LOGIS GRIPS® Antiviralfoil is available in different roll sizes for different surfaces and as pads for door handles and small surfaces (8x10cm, pack size: 10 pieces). Special sizes are available on request.
